

# Project: Familiar

---

## Notes

---

### Introduction:

- User
- Project
- Task
- Session
- UserState
- Interaction

## User

Represents the person using Familiar.

```
class User {  
  
    public:  
  
        UserId id;  
  
        std::string name;  
  
  
        UserPreferences preferences;  
  
};
```

User

└─ id

- └─ name
- └─ preferences
- └─ projects
- └─ state

## Project

A project is a larger goal.

"Build a portfolio"

```
class Project {  
    public:  
        ProjectId id;  
        std::string name;  
        std::string description;  
        ProjectStatus status;  
};
```

Possible status:

```
enum class ProjectStatus {  
    Active,  
    Completed,  
    Archived  
};
```

# Task

A Familiar task should represent an **action**.

```
class Task {  
  
    public:  
  
        TaskId id;  
  
        ProjectId projectId;  
  
  
        std::string title;  
  
        std::string description;  
  
  
        TaskStatus status;  
  
  
        std::optional<TaskId> parentTaskId;  
};  
  
enum class TaskStatus {  
  
    Pending,  
  
    Active,  
  
    Completed,  
  
    Blocked,  
  
    Cancelled  
};
```
